Algorithm 1 Binary Search

Require: Sorted array $A[1..n]$, target value x
Ensure: Index of x if found, otherwise -1

```
low ← 1
high ← n
while low ≤ high do
    mid ← ⌊(low + high)/2⌋
    if A[mid] = x then
        return mid
    else if A[mid] < x then
        low ← mid + 1
    else
        high ← mid − 1
    end if
end while
return −1
```
